

ARCHITECTURAL / 2022 / NEW YORK, NY

Icon Stands

St. Nicholas Greek Orthodox Church, National Shrine

Matching pairs of bronze pedestals at the chapel entry, engineered with Santiago Calatrava.

THE WORK

Two pairs of bronze and marble pedestals at the chapel entry, holding icons that are changed through the year with the church's rituals and celebrations. They serve the flow of the service as much as the eye.

THE MATERIAL QUESTION

Calatrava wanted the cross form uninterrupted, perfect, and balanced: a gravity defying stance that was an engineering problem as much as a design one. And each stand had to carry Pentelic marble.

THE MAKING

Cast and fabricated bronze, engineered with Calatrava's office. We were ten times more careful with that marble than with almost any material we have handled.

IN PLACE

The crates the marble shipped in are still with us. We keep them like reliquaries.
