Annular Sconce

Fused glass and hammered bronze

A thirty inch diameter sconce in fused glass and hammered bronze.

THE WORK

Annular maps the full calendar year of 2019 as the planets of our solar system travel through it. An underlying grid reads as the calendar, and lines of air trace the planets' paths. It is rational and specific, and from a step back it is simply calming: a subtle glow, a slow circular motion, a place to sit.

THE MATERIAL QUESTION

A year of planetary motion had to read as a map, and as a sky.

THE MAKING

In fused glass, the lines we drew to trap air sit among bubbles already in the glass, a starfield the planetary paths are in dialogue with. The hammered bronze is the sun. It blocks the light source, and the light that escapes around it makes a corona across the field.

IN PLACE

In the studio's collection, a one-off and the first of a series. The map dictates the period, so the series stays open: other years, and smaller periods at smaller scales.

DETAILS

Year

2019

Location

Chicago, IL
