Solid Cast Bronze Unfolding Chair

One hundred pounds of solid bronze

The 1941 Krueger steel folding chair, cast solid in bronze and stripped of its ability to fold.

THE WORK

The 1941 Krueger steel folding chair may be the most common chair ever made: a design that cost about two dollars, made from excess steel, built to fold flat and nest by the hundred. The Unfolding Chair takes a second look at it.

THE MATERIAL QUESTION

To unfold the design is to undo the mechanism that defined it. Recast in a hundred pounds of solid bronze, the chair trades functional value for material value.

THE MAKING

Cast solid, it can no longer fold or nest. Designed and executed by Ben Stagl with Bo Rodda, Jason Gillette, Max Davis, and Kuan Wen Chiu.

IN PLACE

A humble stamped steel object, made a monument to itself. Selected for the Chicagoland exhibit at WANTED DESIGN during New York Design Week, 2013.
